# CSCD240 C & Unix Programming

## Homework 12: Practice the use of stream i/o and Unix i/o system calls

### 100 points

The goal of this homework is to understand and practice 1) the C standard library for i/o using the stream model, and 2) Unix system calls for disk i/o. The goal is delivered via the implementation of two functions whose skeletons are provided in the homework source code files, where more detailed instructions and guidance are available.

The deadline of this homework is firm.

**Submission**:

Compress the finished C source code files into one zip file named `hw12.zip`. Only submit the `hw12.zip` file. Make sure your code compiles and runs at the command line.
